

Building Capacity to Support Language Learning and Address the Word Gap for Infants and Young Children

Dale Walker and Kathryn M. Bigelow

Juniper Gardens Children's Project

Institute for Life Span Studies
University of Kansas

Plans for this Session: Virtual Home Visiting Conference 2020

- Overview of the Word Gap and our research at the University of Kansas, Juniper Gardens Children's Project
- Description of the PC TALK language intervention
- Documenting impact of PC TALK with parents and early interventionists/educators
- Efforts to engage communities to bridge the word gap

Background Story of the Word Gap

Hart & Risley *Meaningful Differences in Everyday Experiences of Young American Children* (1995) & *Social World of Children Learning to talk* (1999) (Brookes) study of infants' and toddlers' language interaction in homes

Observed monthly in homes and looked at the interactions between parents and children from 7 months to 3 years old

Their work described how important talk and interaction is to the development of children

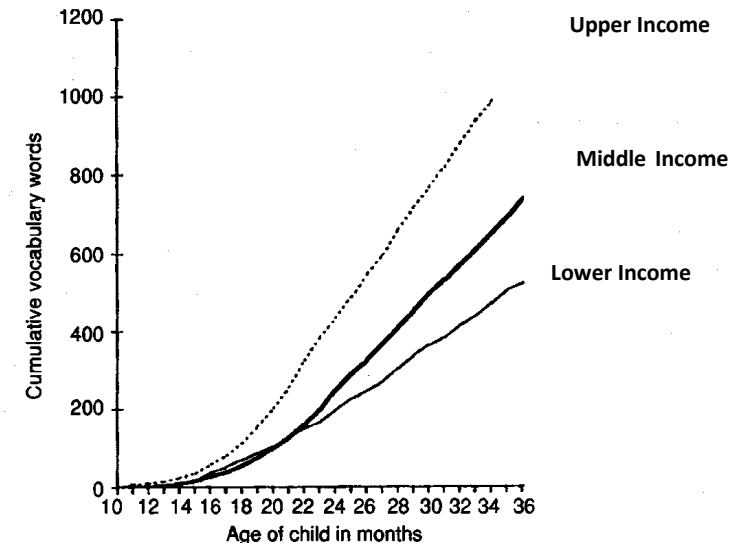

Gap in Amount of Talk Heard in Homes

Children's experiences differed in terms of amount and quality of talk heard in their homes (600 to 3,000 words per hr.)

Some children heard as many as 45 million words, others, 13 million. An estimated difference of over 30 million words heard by age 4.

Children who had the largest vocabularies had parents who:

- Talked more often
- Interacted more
- Asked open-ended questions
- Used fewer prohibitions

(Hart & Risley, 1995, Brookes)

Differential Language Experiences During Infancy Impacted Later Schooling Outcomes

Followed children in kindergarten through 3rd grade, those early deficits in language interaction impacted development up through elementary school

- Understanding of language
- Spoken language
- Reading achievement
- School readiness

(Walker, Greenwood, Hart & Carta, 1994)

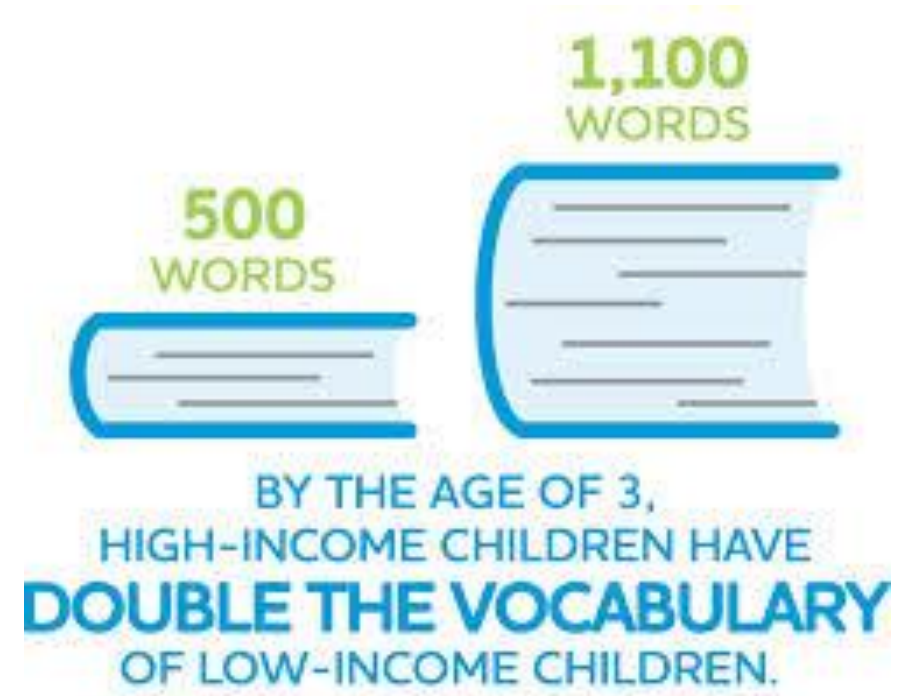

What is the “Word Gap” Why is it Important?

A disparity between the number and quality of words spoken as well as the types of messages conveyed BY ADULTS to children by age 3.

Children experiencing economic disadvantage or poverty are less likely to have the language-learning experiences of children from more advantaged backgrounds.

The size of a child’s vocabulary at age 3 and the trajectory of vocabulary learning are strong predictors of literacy and later school success

Lower language trajectories may set in motion delays in reading and school readiness with profound, lifelong social and economic costs (Heckman, 2006, Shonkoff & Phillips, 2000, Warren & Walker, 2005).

Disparities in Experience Can Have Long-lasting Outcomes

Copyright 2017 Federal Reserve Bank of Minneapolis

What's important for the discussion today

This gap begins very early—long before children begin school.

We cannot wait until kindergarten.

We know a lot about what contributes to it.

We can prevent the gap but it is important to start early.

Some things that we know about poverty and child outcomes

1. The first signs of lower outcomes for children from low-income families are seen between 9 and 18 months of age.
2. The differences only grow larger as children get older.
3. While the gap can be reduced in the later grades, it's much more difficult than preventing it in the first place.

The Good News...Bad News

We know what it takes to bridge this gap.

We have years of descriptive and intervention research pointing to the specific types of behaviors that can reduce the word gap.

These are strategies that parents and family members and caregivers can do and embed into their everyday routines.

We also know that to see results – the strategies have to be used regularly, with fidelity.

These strategies are not always being used for those children who can benefit most.

Recognize that there are challenges with community-based interventions and maintaining parent and teacher engagement in intervention.

Overview and Evidence for Promoting Communication (PC TALK) Strategies

Based on early work of Hart & Risley (1992;1995) and later research around milieu and responsive teaching strategies, we developed PC TALK (Promoting Communication Tools for Advancing Language in Kids)

Studies we have conducted in child care and early intervention home visiting demonstrated effectiveness of PC strategies to increase child communication reviewed

Established importance of fidelity of intervention delivery to child outcomes and discuss ways to support implementation

Promoting Communication Strategies

Tools for Advancing Language in Kids (PCTALK)

Evidence for Promoting Communication (PC TALK) Strategies

PC TALK strategies and associated tools can help build the capacity of parents and educators to promote infant/toddler communication

Studies in child care and home visiting and early intervention demonstrated effectiveness of PC strategies to increase child communication. For additional information

Promoting Communication Strategies

TALK

Tools for Addressing Language Needs

Giving Positive Attention to

Ways to Ask Open-Ended Questions

Ideas for Giving Positive Attention

- Play**
 - Provide time to give positive attention to friends.
 - Model appropriate communication manners.
 - A pause is necessary to ask for help.
- Daily Routine**
 - Give positive attention on by:
 - Responding "You are..."
 - During the attention to your hand.
- Books**
 - Notice who is doing well.
 - When a child is acting.
 - Give positive "Thanks for..."

Children who are

Promoting Communication Strategies

TALK

Tools for Addressing Language Needs

Ask questions and pause for a response:
Ask questions about the child's play that begin with "what, where, why, when, or how." Then, pause to give the child time to think and respond.

Ask about routines you are doing together:
When you are changing diapers, you can keep the child more engaged by asking questions. Try it with other routines, too!

Ask questions that encourage a child to lead:
When pretending cook, you can ask questions that encourage the child to lead.

Questions to Ask:

Child: "What are you playing?"

Child: "Where is your car going?"

Child: "Where is your leg?"

Child: "That's right! That's where your leg is."

Child: "What should we cook?"

Child: "We're making soup."

Child: "Oh, stop stirring your soup!"

When asking questions to children who have difficulty with language, you can give extra support by providing choices or using fill in the blank.

Choices: "What do you want? Do you want the ball or the blocks?" (show choices)

Fill in the blank: "Where is the ball? It's under the..." (point to location)

Open Questions

Open questions are questions that encourage a child to lead. When you ask open questions, you give the child more control over the conversation. Open questions are also called "wh" questions because they start with the words "what," "where," "when," "why," or "how."

Open Questions

Open questions are questions that encourage a child to lead. When you ask open questions, you give the child more control over the conversation. Open questions are also called "wh" questions because they start with the words "what," "where," "when," "why," or "how."

Caregiver Self Check

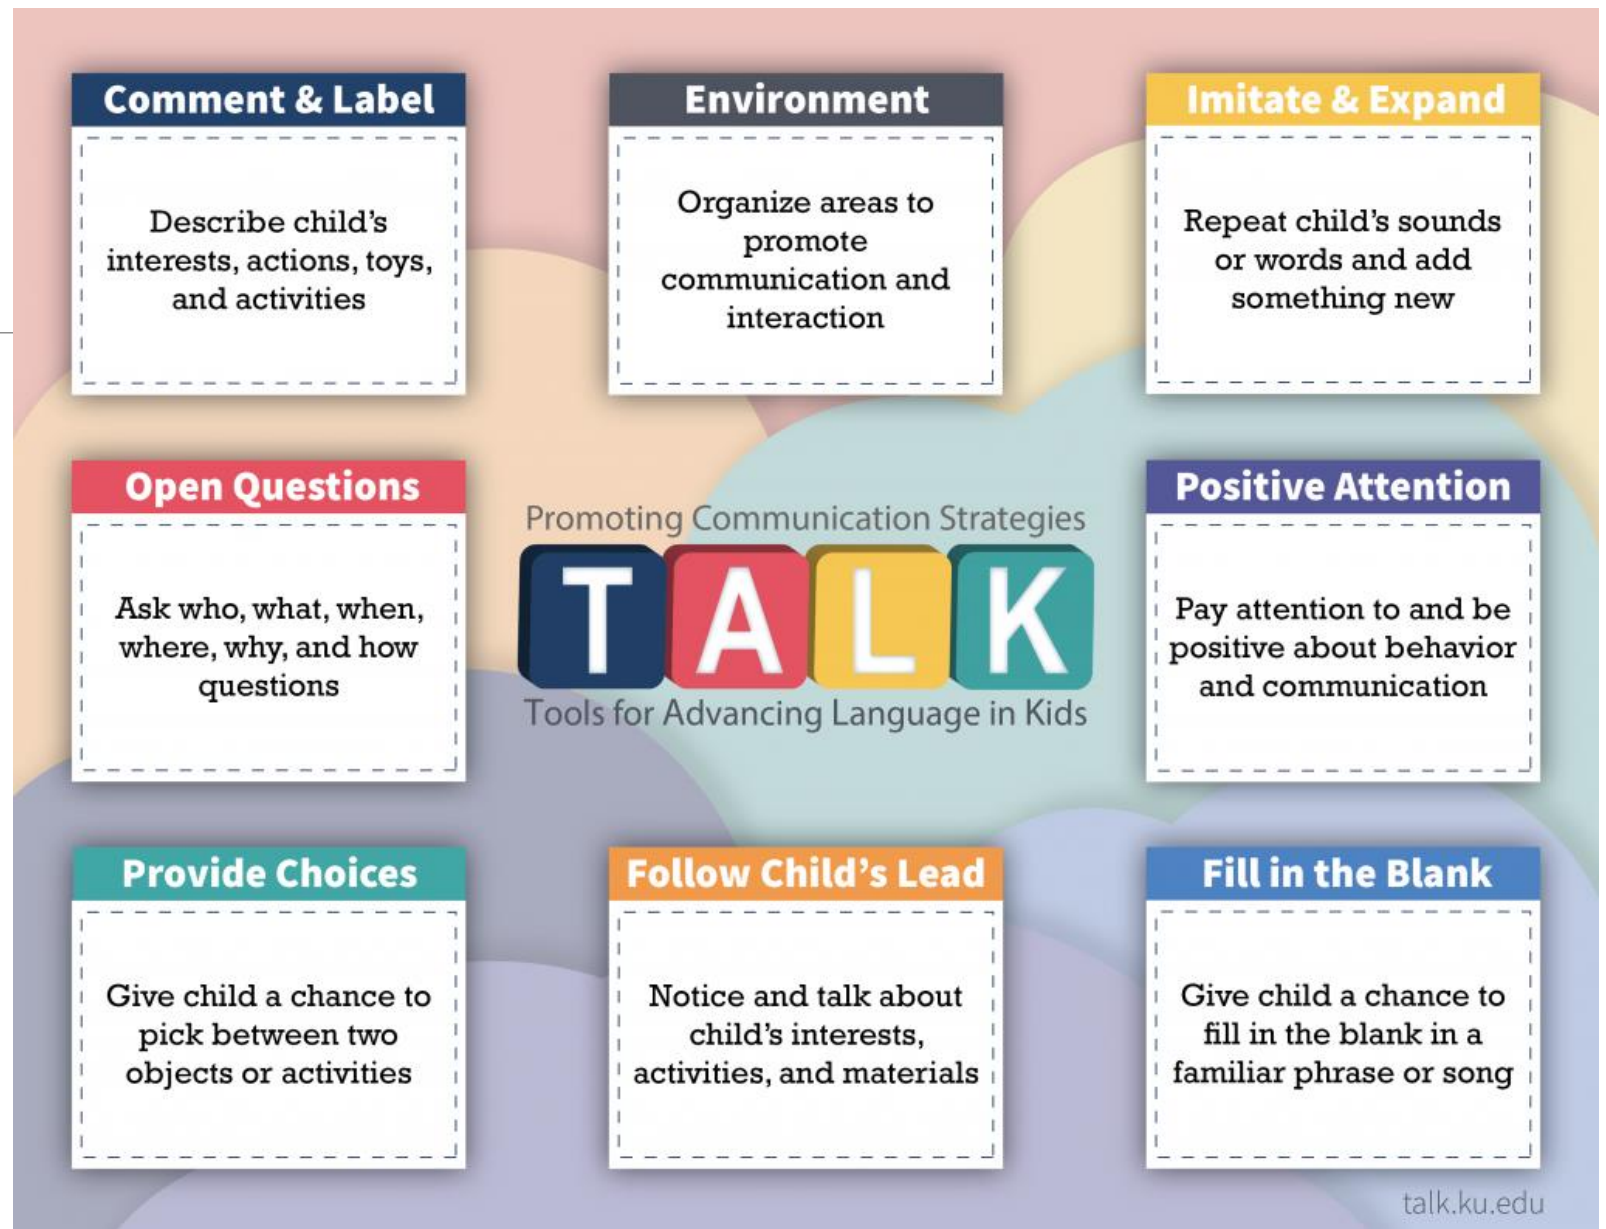

Check strategies and circle routines you will focus on this week.

Fill in circle to indicate how often the strategy was used during that routine.

Not used X Little Half Most All of the time

Routine	Play	Meals	Daily Living	Books	Toilets	Household
Comment & Label						
Imitate & Expand						
Open-Ended Questions						
Provide Choices						
Positive Attention						
Fill-in-the-Blank						
Follow the Child's Lead						

PCTALK Poster

PC TALK Activity Cards

Name the foods children are eating.

"Ethan is eating applesauce and crackers."

Talk about the colors, texture, or temperature of the foods you are eating together.

"The roll is soft and warm."

At a restaurant, talk about how the servers take orders, bring food out, or objects you see around you.

Describe, name, or talk about a child's actions, activities, toys, or materials.

Comment & Label

TALK talk.ku.edu ©2019 Juniper Gardens Children's Project 31

Ask about body parts as you bathe or get dressed, pointing to knees, stomach, hands, etc.

"What is this?"

Ask your child what he or she would like to wear.

"Which shirt would you like to wear?"

While toileting, handwashing, grooming, or dressing, ask questions about what is happening.

"What do we do next?"

Ask questions in a way that encourages children to respond in different ways, rather than simply "yes" or "no."

Open Questions

TALK talk.ku.edu ©2019 Juniper Gardens Children's Project 19

Arranging the Environment

Designing the environment to promote communication

- Having books to read in quiet, comfortable area
- Providing regular routines
- Displaying pictures at child's eye level
- Providing opportunities for exploring environment

© 2004 University of Kansas

Following Child's Lead/Responsiveness

Noticing and talking about the child's interest, activity, or materials

Using child's interest to provide opportunities for communication

- Describe child's actions
- Allow child to direct activities
- Give choices

Commenting and Labeling

Describing actions, toys, activities

Children hear talk about actions and hear labels

- Comment on what the infant or toddler is playing with
- Talk about the pictures in a book

Imitating and Expanding

Imitating is repeating a child's vocalizations or words

- Repeat sounds or words child makes

Expanding is adding something new to what the child said

- Add to the child's statement by describing in a slightly more complex way

Asking Open-Ended Questions

Asking who, what, when, where, why questions that children can answer in multiple ways

- Ask questions related to child's play or interest
- Ask questions related to routines
- Pause after asking question, if no answer, fill in answer yourself

Promoting Communication: Time Delay/Fill in the Blank

Planning a delay during a predictable routine promotes communication

- Giving child the chance to fill in the blank in a song or common phrase they are familiar with
- Children practice talking
- Emphasizes child's success with words

Providing Positive Attention and Praise

Attending to and being positive about behavior and communication

- Positive attention creates opportunities for children to practice skills
- Playing and spending time with children gives positive attention
- Encourages future child communication

© 2004 University of Kansas

Providing Choices

Providing choices means the child will need to communicate their preferences

- Encourages communication
- Provide choices by rotating materials
- At snack time, present two options
- Give child options in play (toys/book reading)

How is the PC TALK Intervention Embedded into Home Visits?

Home visitors incorporate PC TALK Strategies in home activities to extend work toward achieving family language goals

Use across daily home routines (play, meals, bath, book reading, etc.)

Individualize to child's, families' needs

Intervention Coaches/home visitors support intervention delivery - observe and provide feedback to parents on their implementation of strategies

Graphs shared with parents to provide feedback on use of PC TALK Strategies

Coach, home visitor, and Parent Self-Checks used to self-monitor, prompt discussion

Documenting Strategy Use and Progress in Child Communication

Early intervention staff/coach reviews parent and provider checklists with parents or teachers and shares graphs from intervention fidelity observations.

Measuring Intervention Delivery

PC Observation (PC-Obs) App

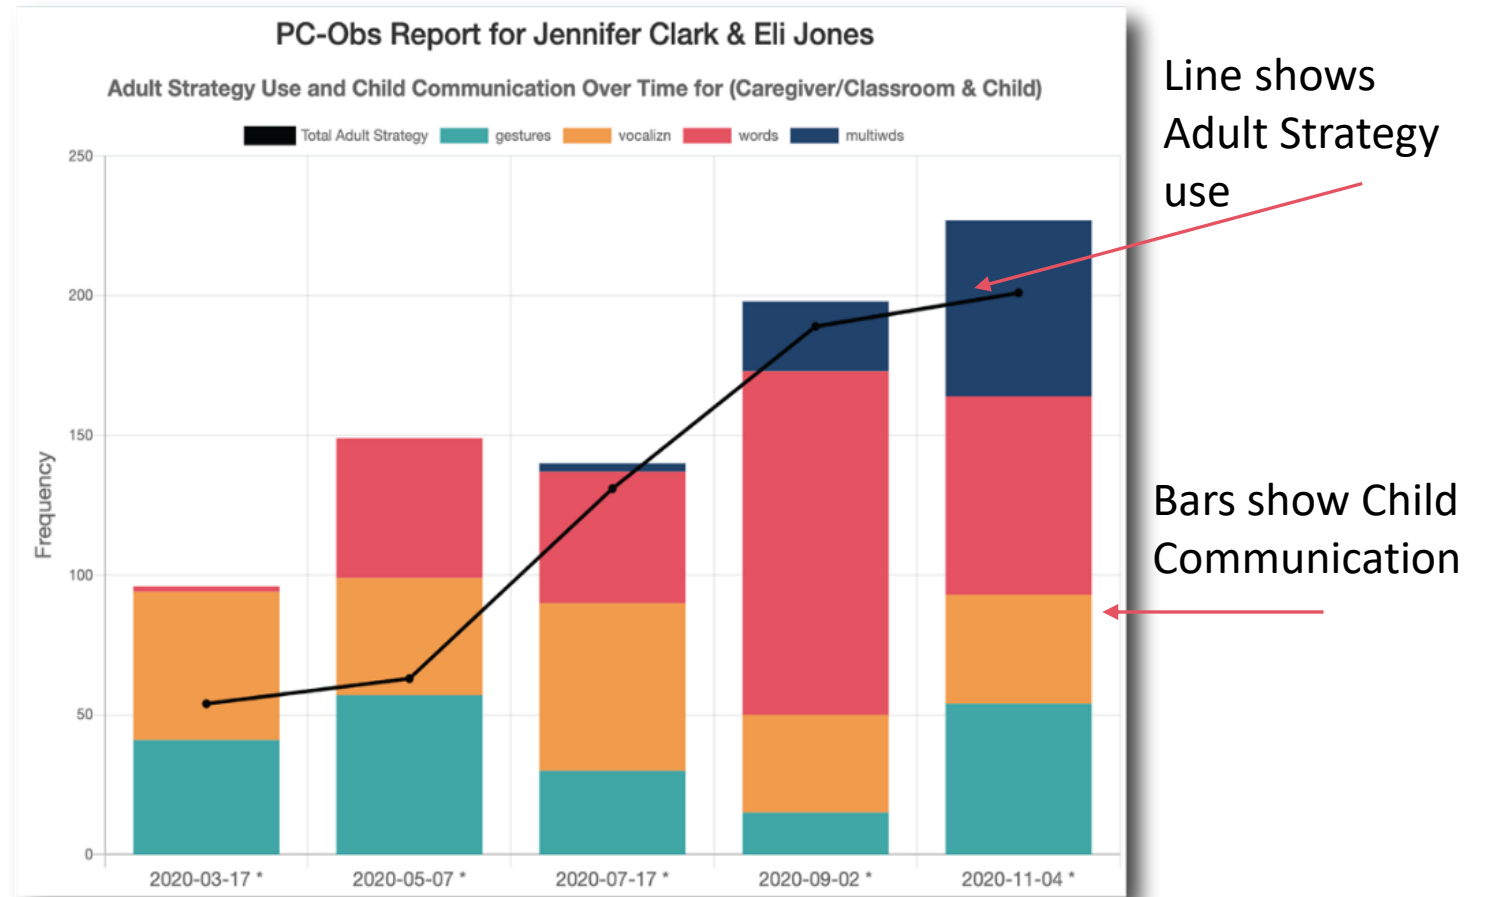

Providers use a tablet or phone (Android/iOS) to collect data on adult strategy use, child communication, and environment during daily activities.

Data are uploaded to a web dashboard, where home visitors and parents can view summary graphs.

PC-Obs Data Dashboard

PC-Obs Reports provide you with data to provide feedback and support parents in reflecting on their practice

Showing parent and child data together helps to reinforce the link between parent strategy use and child communication

Caregiver Self Check

Promoting Communication Strategies
TALK
Tools for Advancing Language in Kids

Caregiver Self Check

Check strategies and circle routines you will focus on this week.
Fill in circle to indicate **how often** the strategy was used during that routine.

Not used Little Half Most All of the time

Caregiver: _____
Provider: _____
Date: _____

	Play	Meals	Daily Living	Books	Outings	Household
Comment & Label						
Imitate & Expand						
Open-Ended Questions						
Provide Choices						
Positive Attention						
Fill-in-the-Blank						
Follow the Child's Lead						

Planning and self-monitoring tool

During visits, providers and parents create a plan:

- What strategies the caregivers will use
- In which routines will the caregiver use the strategies

During the week, caregivers practice the strategies in daily activities:

- Fill in the circle to indicate how often strategies were used during daily routines

Start small, and build upon progress – start with 1 or 2 strategies in 1 or 2 routines, and then build upon caregiver successes over time

The Basics of PC TALK Sessions

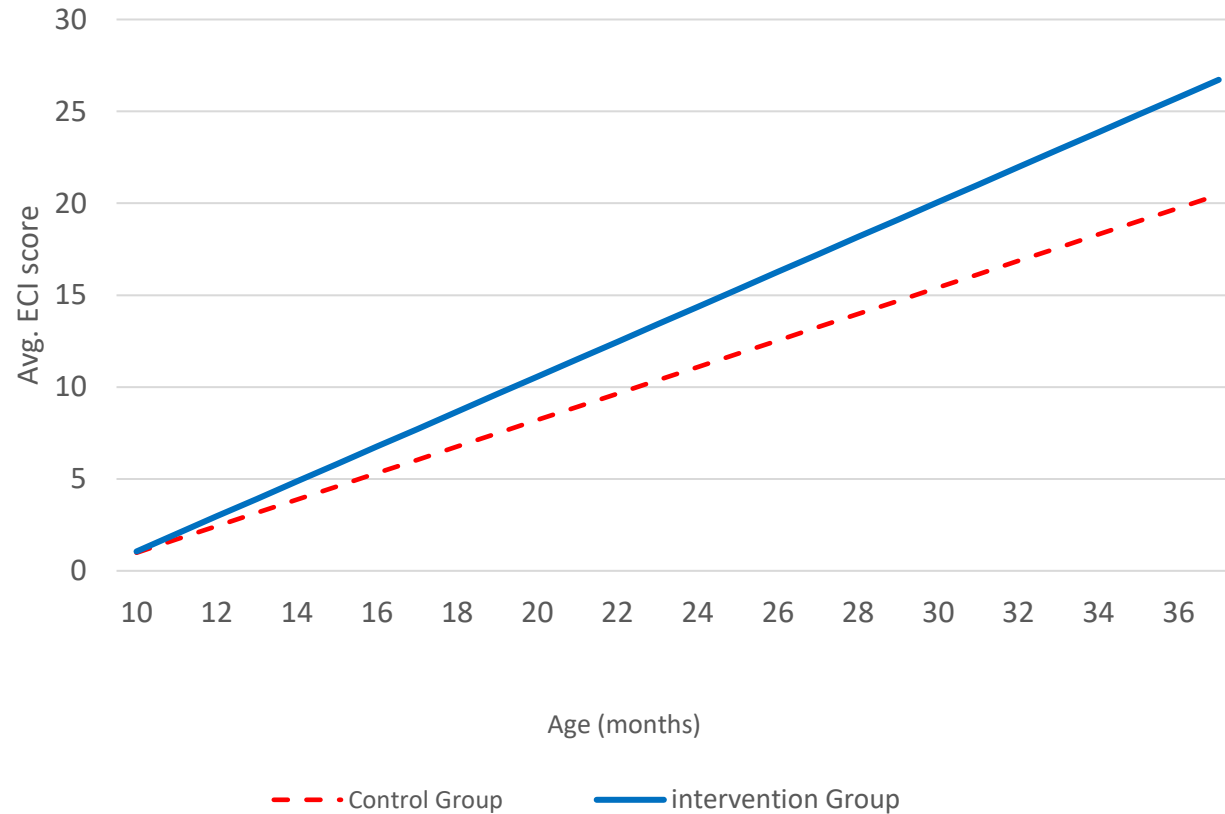

Introduce	<p>Introduce PC TALK and the Strategies</p> <ul style="list-style-type: none">• Tools: Videos, Poster, Handouts
Observe	<p>Observe with PC-Obs and collect data</p> <ul style="list-style-type: none">• Tools: PC-Obs data, Self-check
Plan	<p>Plan together on which strategy or strategies caregivers will focus on first, and in which routines</p> <ul style="list-style-type: none">• Tools: Activity Cards, Self-check
Review	<p>Review progress and add new strategies and routines over time and as child communication grows</p> <ul style="list-style-type: none">• Tools: PC-Obs, Self-Check, Handouts, Poster, Activity Cards

Translational Research-Practice Partnership

- 3 early learning schools that are part of the Educare Learning Network, serving children in EHS/HS from economically disadvantage backgrounds together with researchers
- Demonstrate the effectiveness of implementing a naturalistic language intervention to build the capacity of teachers and parents to support children's language learning with 145 infants through preschool-aged children and 34 families in a feasibility study.

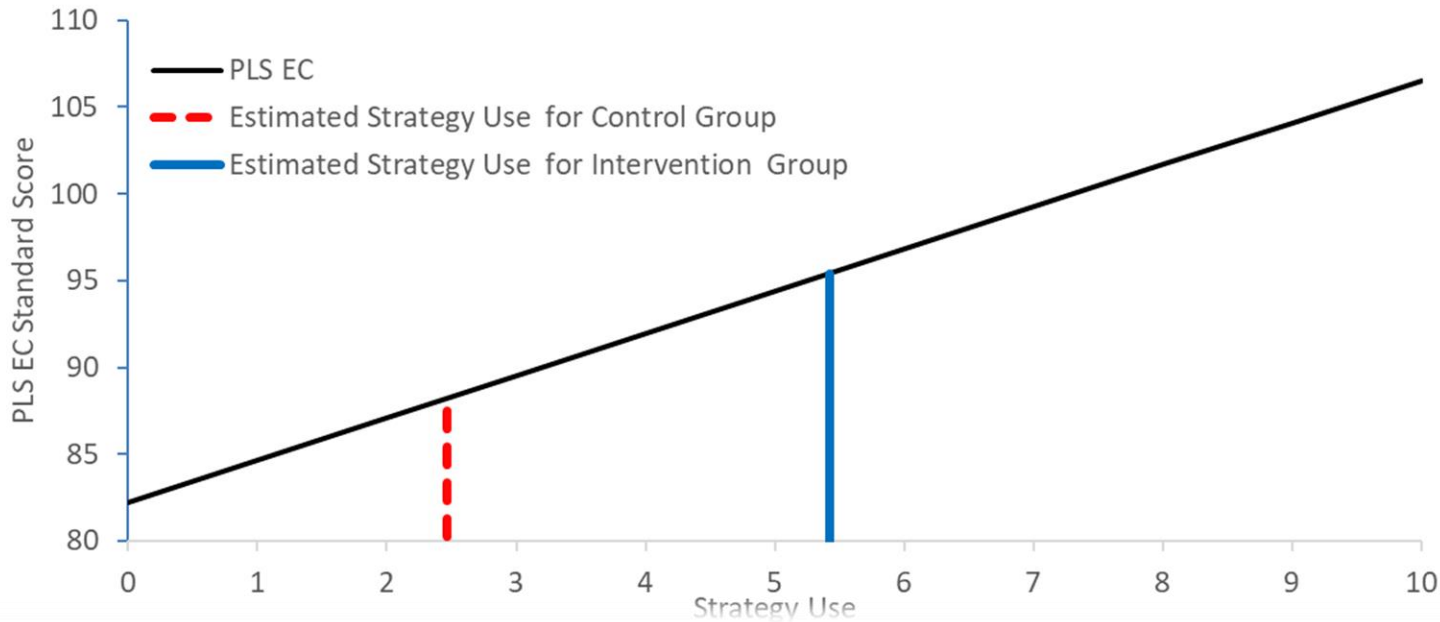

PC Intervention Use Related to Growth on the Early Communication Indicator IGD

Increases in caregiver's PC strategy use associated with greater child communication growth on the ECI.

With increased use of the strategies, children were more likely to communicate at a higher rate by 36 months compared to children in Control group.

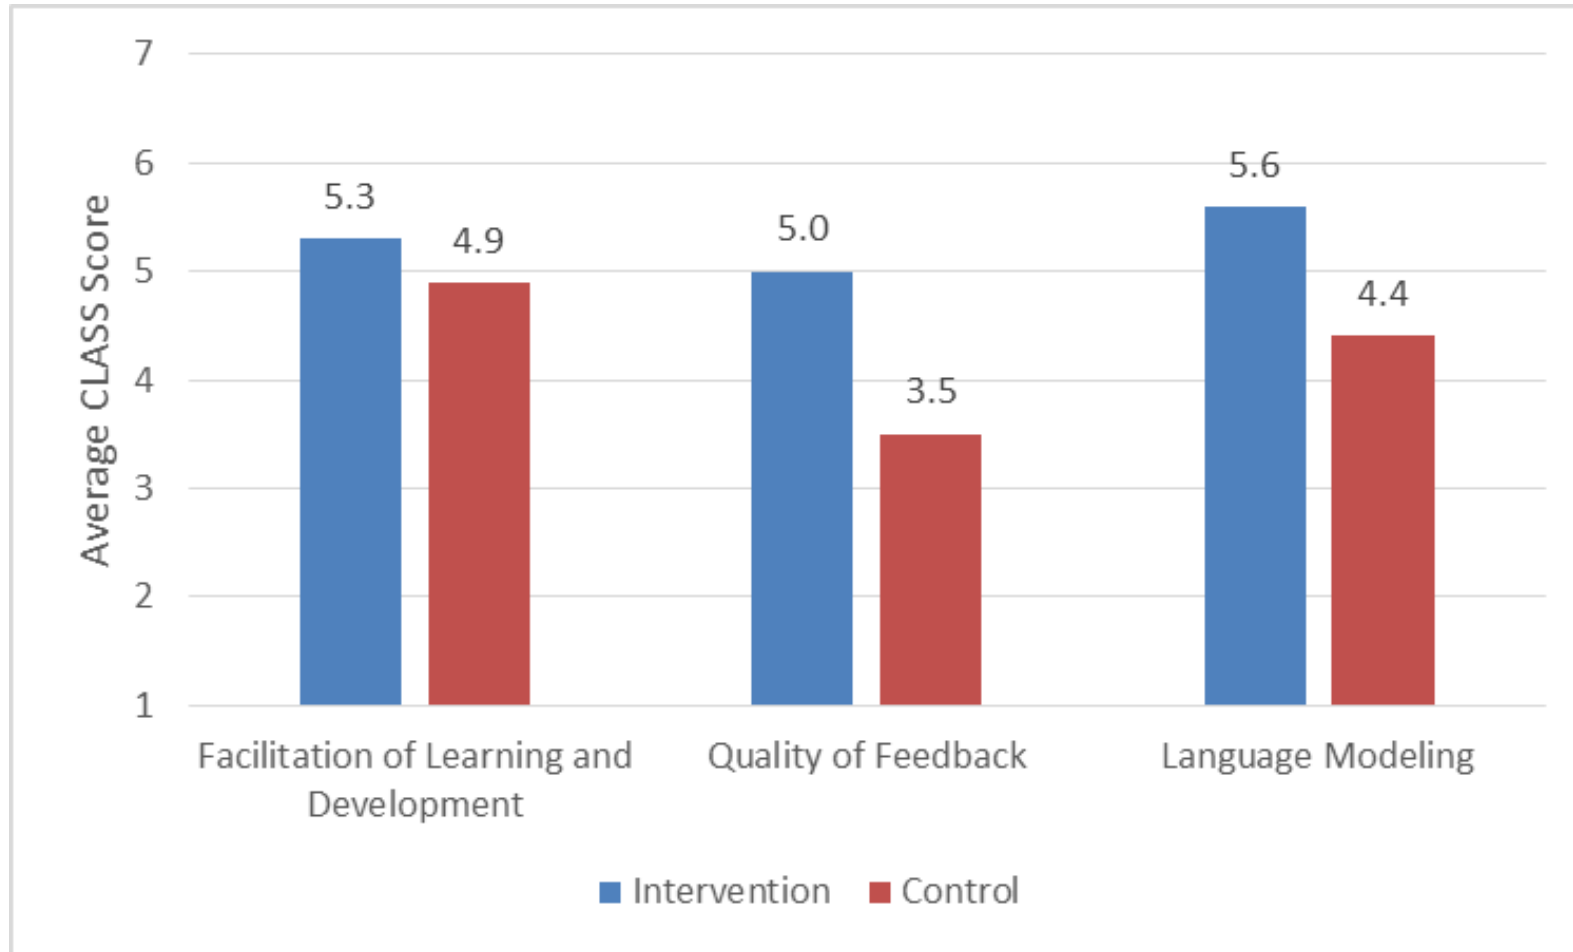

PC Intervention Use Influence on Preschool Language Scale (PLS)

Caregiver's level of strategy use was found to have a positive influence on the PLS expressive communication.

The PC TALK intervention led to more strategy use by caregivers which, in turn, led to a significant difference in the PLS expressive communication standardized score for the Intervention group compared to the Control group.

CLASS Scores for Early Education/Child Care

Intervention and Control Classrooms on the Toddler CLASS scales related to language. Across the constructs related to supporting language, differences were observed between the Intervention and Control Groups.

Devereux Early Childhood Assessment (DECA)

Children in the Intervention whose parent's learned about the intervention strategies in parent meetings scored higher on 3 DECA scales compared to children in the Comparison group whose parents did not attend the meetings.

Level of Teacher-Reported Behavioral Concerns for Intervention and Comparison Group Children

Children whose parents attended monthly parent meetings addressing the word gap in a parenting group and practiced using the PC intervention strategies, had fewer behavioral concerns on the DECA than comparison children from the same classrooms.

Model Demonstration Center for Promoting Language and Readiness in Early Childhood

Project to build the capacity of parents and educators to promote communication skills of 166 infants and toddlers with special needs across 3 EI programs.

Children who received higher rates of PC Strategies from their parents were more likely to have increases in PLS standard scores over time and ECI progress monitoring.

PLS scores were likely to decline for those receiving lower rates of adult talk.

Project Engage: Text messaging increases parent' use of PC TALK

To promote parent engagement, we examined the impact of text messaging on parent use of PC Strategies

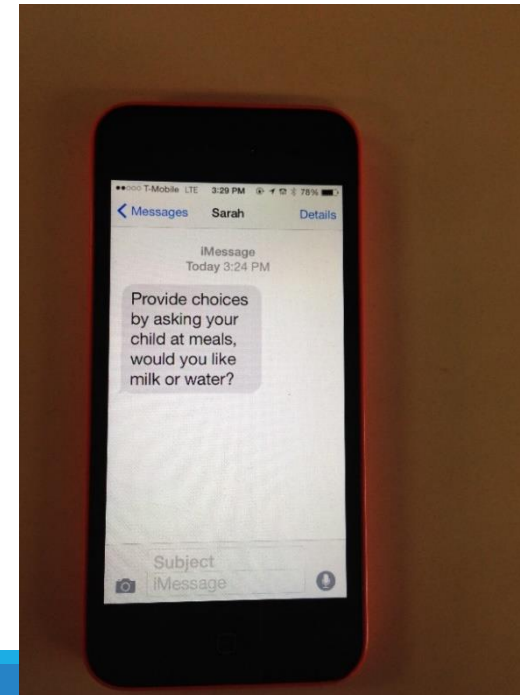

- Randomized study in rural and urban EHS and Part C, with 150 children and their parents, and 50 home visitors

Significant relationship between text message rate and parent use of PC Strategies

- Text messaging improved parent use of the strategies, which led to increases in children's expressive communication
- On average, with one more text sent, the parents used 3.33 more PC Strategies

Text messages helped to support parent engagement in the intervention, and strategy use

Bigelow, K. M., Walker, D., Jia, P., Irvin, D., & Turcotte, A., (2020). Text messaging as an enhancement to home visiting: Building parents' capacity to improve child language-learning environments. *Early Childhood Research Quarterly*, 51(2), 416-429. <https://doi.org/10.1016/j.ecresq.2019.12.010>

Talk Around Town App

Delivers real-time, location specific tips and reminders to help parents increase the quantity and quality of talk to children.

Uses GPS technology on smartphones to deliver tips while visiting community settings—stores, libraries, parks.

Early childhood programs providers access a web dashboard to view families' outing data, and parent responses to a brief in-app survey.

The key goals of PC TALK

Intervention developed to assist early learning and intervention programs in becoming platforms for bridging the word gap

Designed so that intervention can be intentionally embedded into daily routines to increase support for children's language learning

Document intervention by generating graphs and reports to provide feedback to interventionists and parents

PC TALK was designed to be flexible and align with existing home visiting and child care curricula

Make a measurable difference in child language outcomes

The Bridging the Word Gap Community Action Plan (BWG-CAP) is a guide to engage all sectors of the community toward actions that promote parent-child rich language interactions so that children are ready for future academic success.

Community Action Planning Guide

- The BWG online Community Check Box Evaluation System is a proven tool from documenting a community's progress in implementing their action plan.
- The system documents progress completing action items contained in their Community Action Plan.
